Introduction

The RMI system is the self-help tool of KUBOTA for third party dealers for the download of Repair and Maintenance Information (RMI).

How to use RMI system?

Serial Number (PIN) search

Information inside the system can only be obtained via the PIN (Product Identification Number) of a specific machine. The PIN number exists of 17 digits.

The "PIN number" field is an mandatory field. The PIN is the serial number of the device and can be found on the serial number plate of the machine.

To search for information of a specific machine, follow the instructions hereunder:

- Fill in the correct PIN in the "PIN number:" field
- Select the "Find" button

	PIN SEAF	ксн
PIN number:		
KBTMAAFM3G1	76077	
Find		

After the RMI system has found a correct PIN number all relevant data will be shown.

Search

Text search function

Information can also be found by a text search function. This function searches on all text of the post (Media not included).

To search via text, follow the instructions hereunder:

• Fill in a search term in the "text search" field

Text search "Search Term"

• Select the "Search" button

Search

Text search function from selection

Information can also be found by a text search function after a selection has been made. This search is on title only.

• Fill in a search term in the "Search within results" field

Search within results: "Search Term"

RMI system number search

Every post inside the system has its own unique identification number, called E-Service Number. It is possible to search for a specific post via the "E-Service Number" search field:

• Fill in a RMI system number in the "E-Service N" field

E-Service N° KE-

• Select the "Search" button

Search

The E-Service No can be found in the left top of every opened post, see example.

View information

After the correct post has been found there are 2 options:

- Open the post by clicking on the download button
- Open the post by clicking on the Title of the post
